125 batch(10am)

6302004151
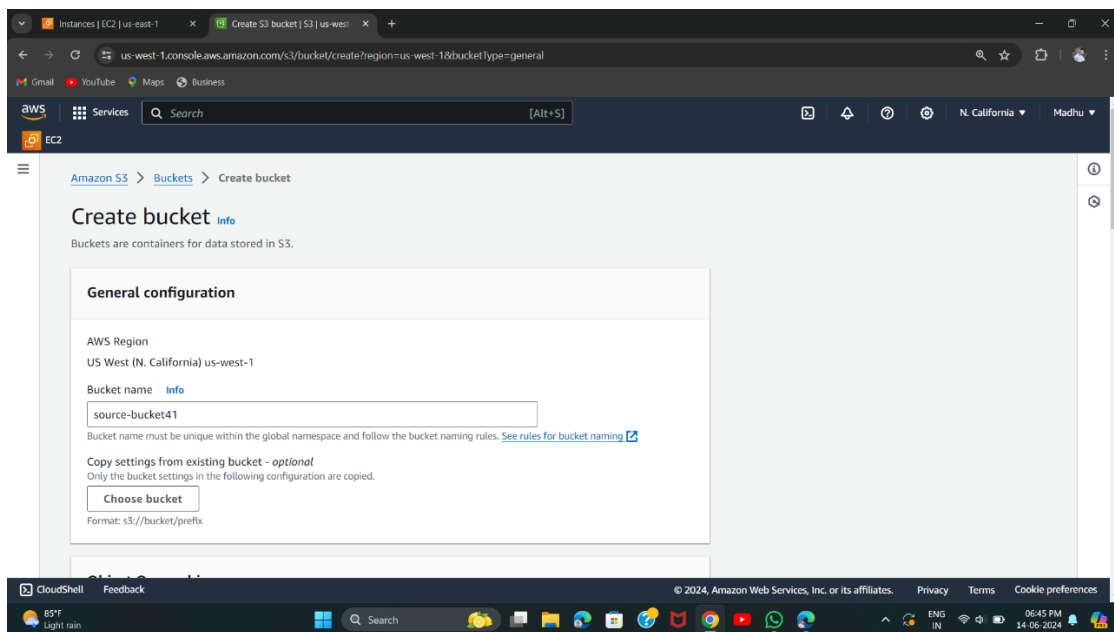

Task:Cross Replication
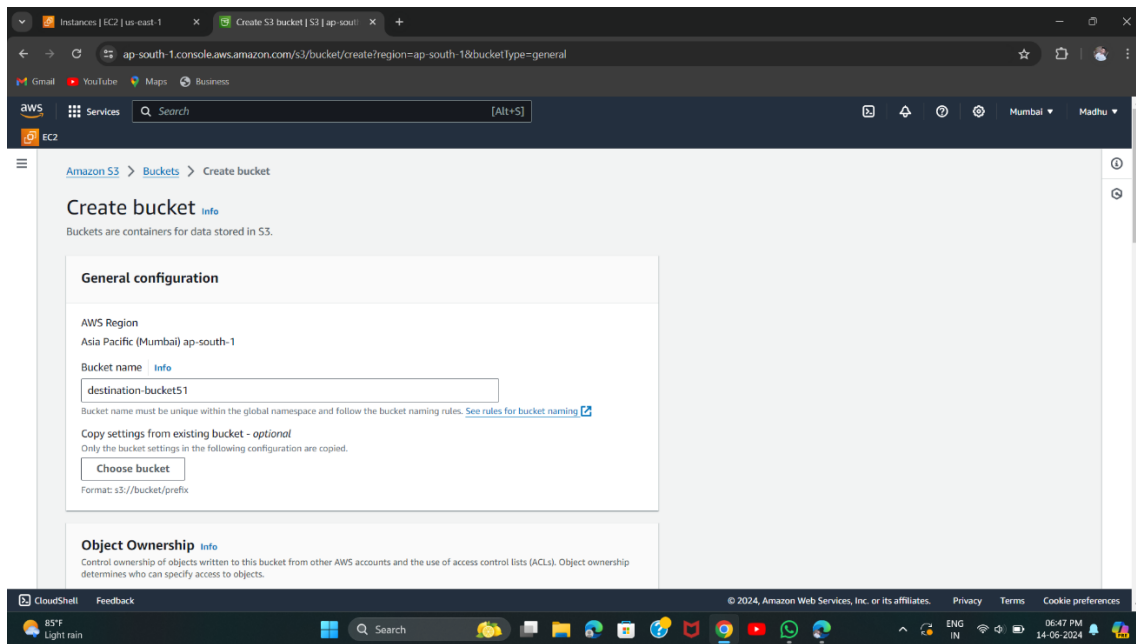

Process of cross-region replication

* Go to AWS Console login ->login to account.

* Go to S3 then search buckets .

* Now create buckets(sourse & destination) in different regions .

Step1:we creat two buckets in two different regions

One is source-bucket41 in (California) another one is destination-bucket51(Mumbai)

Step2: Now we upload a files or folders in the (source-bucket41) in California.
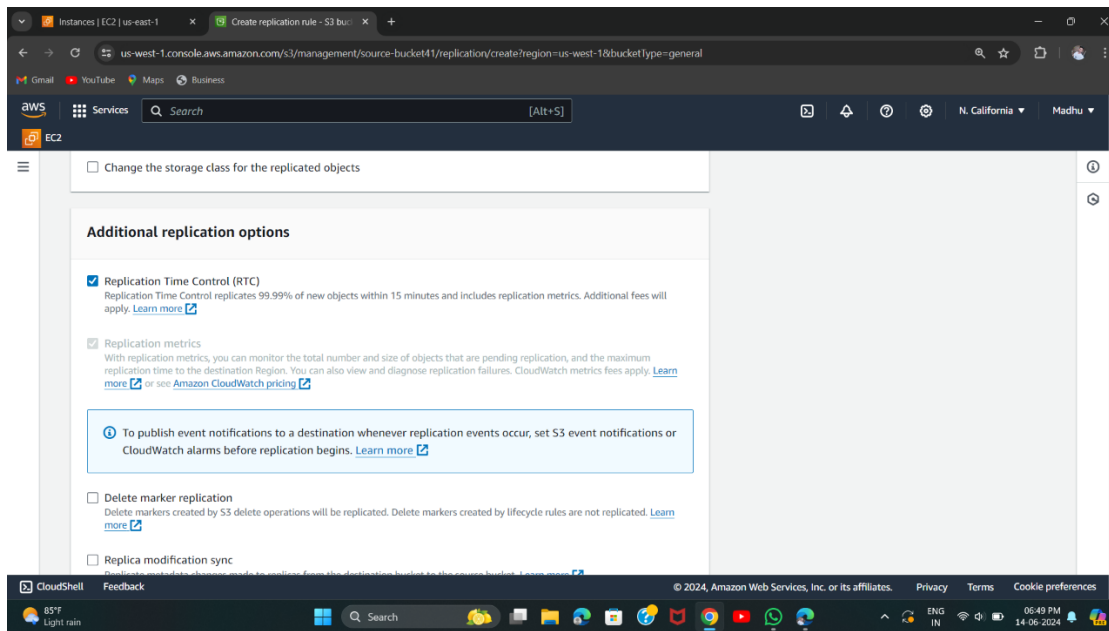

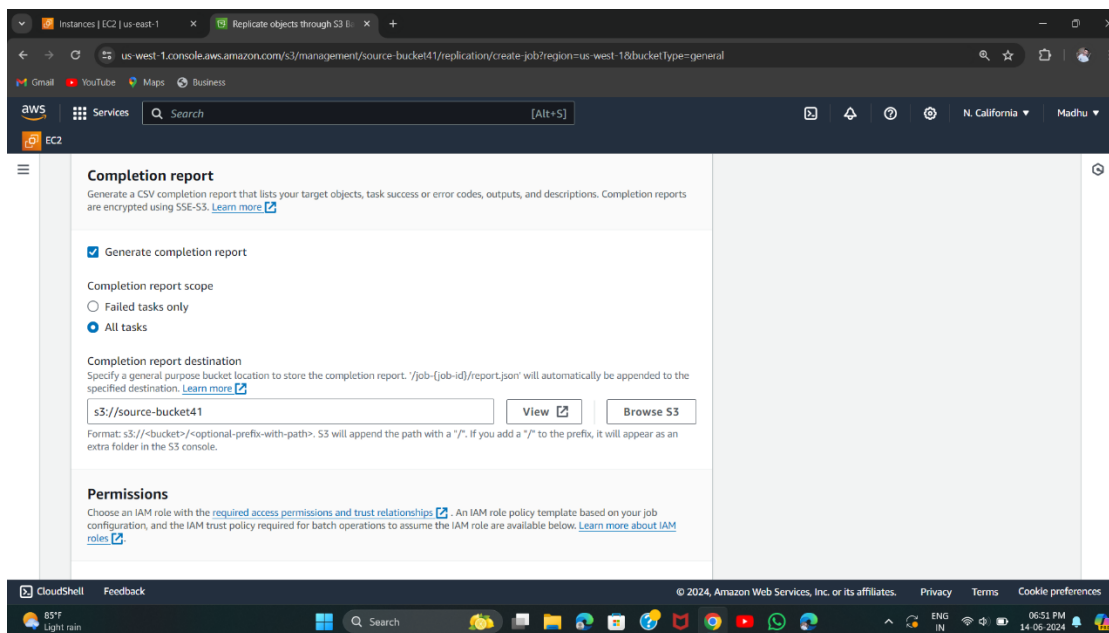

Step3: Now transfer (source-bucket41) files or folders into (destination-bucket51) to use
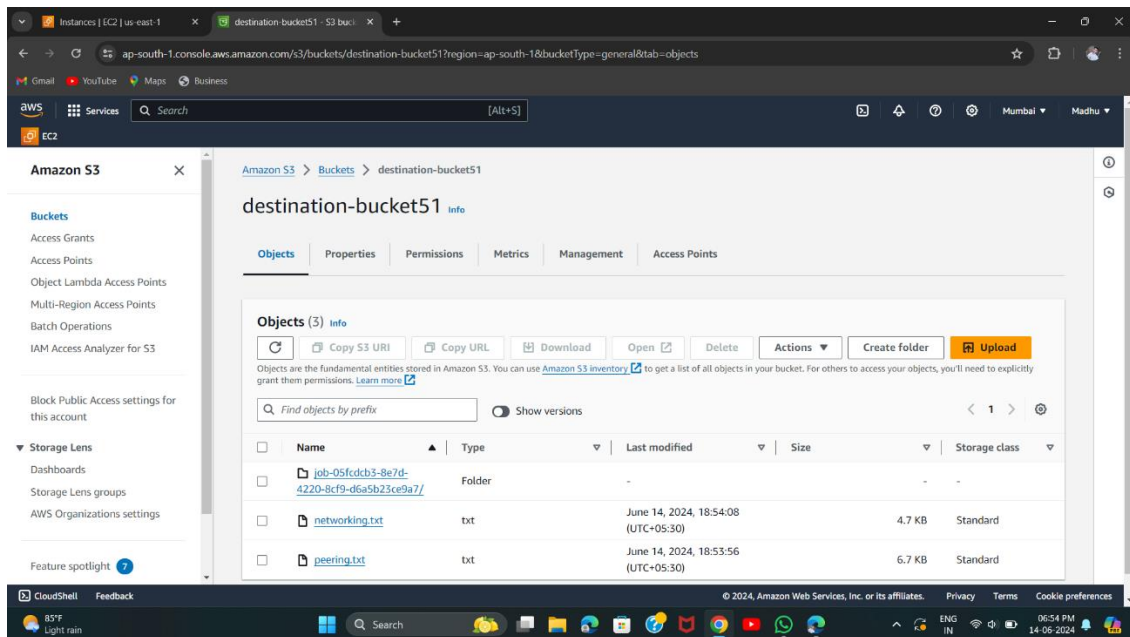

Replication rule

In additional replication options Select RTC (Replication Time Controal)

Step4: In complition report destination to select the destination files or folders

Now we can see files in destination-bucket51

*The files in the California region bucket will now the files replicate in the mumbai region (destination-bucket51)

*In this way we replicate the buckets
